THE GOLF CLUB AT
Crown Colony

#1 Par 4 Black 423 Purple 395 White 362 Gold 352 Green 302 Red 250

- Opening up the view and increasing the playable area is the goal for this starting hole.
- By trimming back the vegetation along the tees, the left half of the fairway is revealed.
- Bunker reduction on the right side allows the fairway to widen as well.
- Gentle contouring of the fairway will help move water properly to nearby basins.
- The approach to the green complex will expand to allow for better ground access to the putting surface.
- A low chipping area will replace the bunker on the left side creating more short game recovery options.

#2 Par 4 Black 407 Purple 396 White 382 Gold 358 Green 306 Red 250

- While the lake on the left is the dominant feature on this par four, its prominence is diminished by the sheer size of the fairway area.
- The overriding goal for this hole is to shift the focus and the fairway to the water's edge. Bold play will be rewarded, while the cautious option brings the proposed bunkering into play.
- The wide side of the hole is framed by two large target bunkers and irregular mounding, but from this angle the front right green side bunker must be managed to access the putting surface.
- The putting surface will slide back, adding length to the approach, but ample area is available to run a ball onto the green's surface.

#3 Par 3 Black 184 Purple 165 White 152 Gold 133 Green 125 Red 112

- The par threes at Crown Colony are a visually appealing group. We will be looking to improve club selection diversity within the framework of the existing tees.
- As is the case on most par threes, more tee space is needed. The back tee will expand and a new forward tee will be added.
- While the water feature is visually significant, it doesn't really come into play for better golfers. The pond will expand into the existing bunker at the front right edge of the green.
- The massive bunkering on the left side will be reconfigured and reduced, creating more fairway area.
- The putting surface expands, adding challenging hole locations, especially on the back right section.

Crown Colony

Holes 4, 5 & 6

#4 Par 4 Black 405 Purple 377 White 350 Gold 333 Green 294 Red 261

- Accuracy is a must on this mid-length par four.
- For the most part, the spacing throughout the course is well planned, but there is a tight spot between this hole and the seventh. To alleviate the issue, the tees and cart path on this hole will shift. Additionally, a bunker will be added down the left side to help screen the cart path.
- To create more space, the mounding along the right side will be knocked down as the fairway is widened on the right. Selective clearing and underbrushing will add to the perception of width.
- The putting surface will present a longer, narrow target and a low, broad chipping area will replace the hump left of the green.

#5 Par 5 Black 540 Purple 528 White 500 Gold 460 Green 411 Red 378

- Today's technology greatly impacts dogleg landing areas that were designed a "few" years ago. A new back tee will help keep balls from running through to the hidden hazard lurking over the horizon.
- Additionally, an added containment bunker on the right side combines with the cross bunker to better define the proper line of play.
- The pond will be reshaped, widening the landing area in the narrow neck while bringing the hazard more in play closer to the green.
- A pair of bunkers will further connect the hazard to the putting surface while buffering the boundary line.
- The putting surface will be elevated and surrounded by fairway cut chipping areas.

#6 Par 4 Black 417 Purple 402 White 370 Gold 350 Green 320 Red 262

- An exciting hole, that will be even more so as we enhance and reveal the characteristics that make it one of the premier holes on the course.
- A viewing slot will be cut between two newly shaped bunkers.
- As the bunkering is simplified, the fairway area expands.
- The putting surface will slide to the water's edge on the right, opening up a vast bail out area on the left side.
- Though certainly a safe zone, getting a ball up and in from the left side will require skill and proper execution.

#7 Par 3 Black 213 Purple 185 White 163 Gold 145 Green 132 Red 101

- Taking pressure off the congested area between the 4th and 7th holes is a driving factor on this outstanding par three.
- The shifting of the tees and cart path aren't massive, but it will make a difference.
- A new back tee helps improve yardage diversity and will greatly test the longest hitters at Crown Colony.
- All teeing area will be increased with no space wasted.
- The putting surface also slides to the right, and the bunker will be reduced.
- A welcoming approach and reasonably safe zone on the left allow less than perfect shots to remain playable.

#8 Par 4 Black 340 Purple 320 White 311 Gold 281 Green 248 Red 223

- The 8th hole may be one of the most anticipated changes at Crown Colony.
- Short par fours are often favorite holes as they allow all golfers the chance to truly experience the intended strategy of the hole.
- The pond on the left will extend almost all of the way to the green complex, bringing it into play for all golfers.
- Due to the increased presence of the hazard, the fairway will also widen to offset the new challenge.
- The angled putting surface will be elevated, demanding both proper distance control and accuracy, while rewarding those who plan for the proper position from which to play.
- A small gap between the greenside bunkers will offer hope for balls played along the ground.

#9 Par 5 Black 560 Purple 534 White 516 Gold 447 Green 384 Red 373

- As the pond extends on the 8th hole, the back tees and cart path will shift on the par five 9th.
- The fairway bunker in the first landing zone will be reshaped, still highly visible, yet reduced to increase fairway area.
- In the second landing area the massive bunker will be reduced by over 3,000 sq.ft. and reshaped as a cross bunker. It will become the decisive strategic feature of this hole.
- The new green complex will be designed to create choices. By tucking the newly shaped putting surface along a slender ribbon of sand on the left, a broad chipping area takes the place of the old green.
